## Santina Celotto

presentate alla nostra Università il 28 ottobre 2014 e relative ad un viaggio da lei effettuato l'anno precedente

# NUOVA ZELANDA

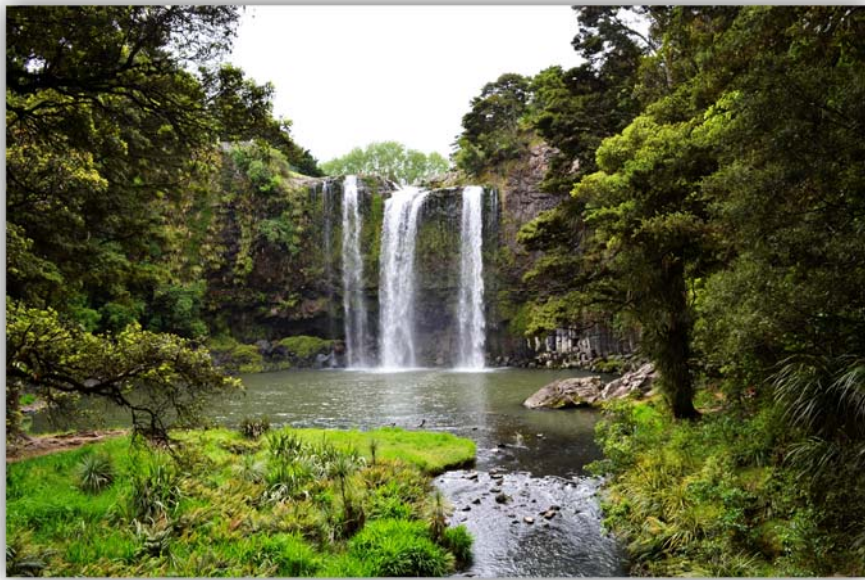

**NATIVE ICE PLANT**  
*Disphyma australe*

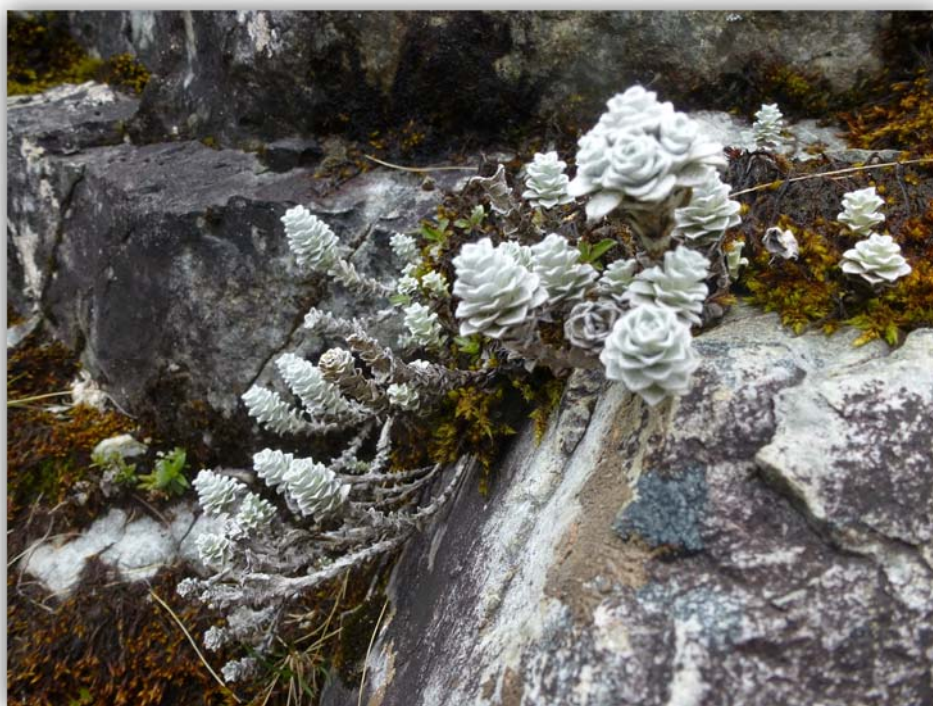

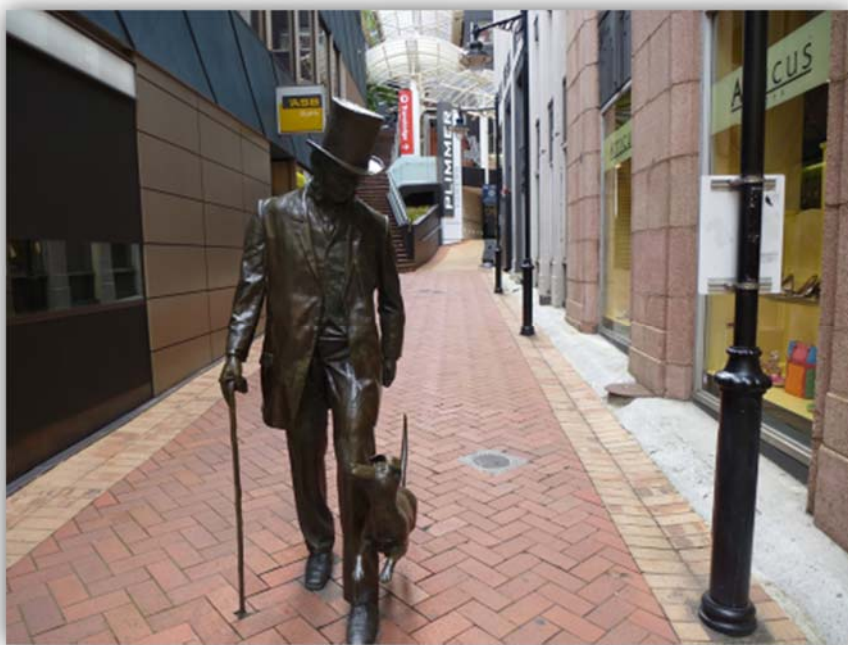

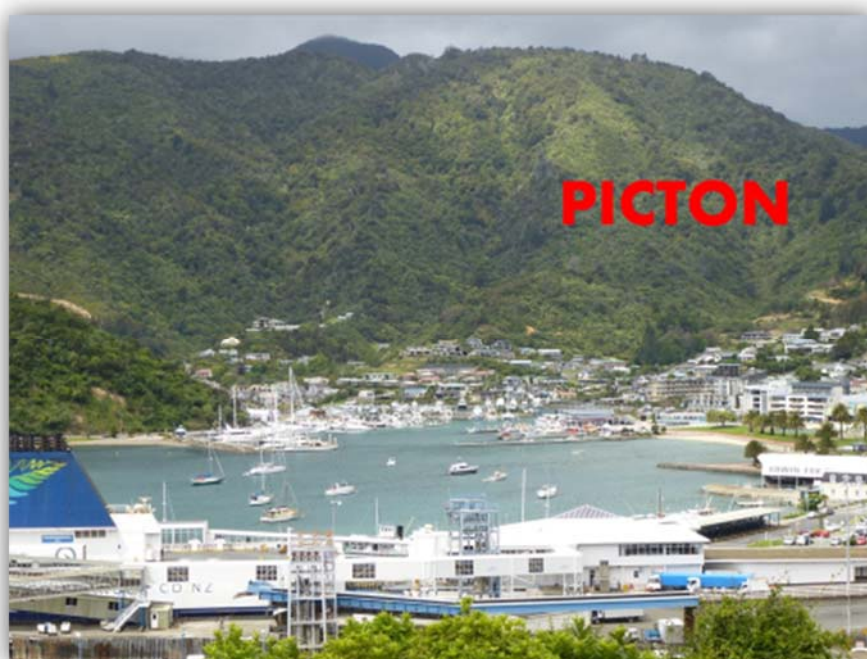

# ABEL TASMAN National Park

**HEKETARA**  
*Olearia rani*

**MAKOMAKO**  
*Aristotelia serrata*

Department of Conservation  
*Te Papa Atawhai*

**Norme di comportamento da tenere in presenza delle foche**

## Peninsula Seal Colony

***Kaimokehu***  
Seals near the carpark are resting.  
Do not disturb  
Enjoy your visit,  
but do not attempt to touch or move a seal.  
Seals are wild animals and may bite causing serious injury

**10 metres**

**Sedimenti oceanici emersi**

### Uplifted Ocean Sediments

**How are sediments on shore and in the ocean?**  
 Sediments are made up of particles of sand, silt, clay, and other materials that have been eroded from the land and carried to the ocean by rivers and streams. They settle to the bottom of the ocean and form layers of sediment.

**Rock Platforms**  
 Rock platforms are flat, rocky areas that are exposed at low tide. They are often found along the coast and are made of sedimentary rock. They are important for many organisms, including birds and fish.

**LIFE ON THE EDGE**

The life on the edge of the ocean is a fascinating and diverse world. It is a place where the land and the sea meet, and where many organisms have adapted to survive in this unique environment.
